PROFILE

I am a Frontend Developer focused on React/Next.js and TypeScript, with foundational knowledge in Python. I have experience working with APIs, database integrations, and CMS platforms such as Sanity and Strapi. I've worked with PostgreSQL, MySQL, and MongoDB, and use Tailwind for styling.

As a person, I am curious, responsible, and adaptable. I have worked in agile environments, enjoy sharing knowledge, and quickly learn new technologies. When I encounter something I don't know, I learn it and make sure to contribute every time.

SKILLS

Languages & Technologies: HTML, CSS, Sass, Tailwind CSS, JavaScript, TypeScript, C#, Python, SQL

Frameworks & Libraries: React, Next.js, Django, Vue, Flask, Node.js, Vite, Material UI, NextAuth, Framer Motion

Databases: PostgreSQL (including Neon, Supabase), MySQL, MongoDB

Database Tools: DBeaver, Prisma ORM, Mongoose ODM

Testing: Jest, Pytest, Cypress

CMS: Sanity CMS, Strapi, WordPress

Tools: Figma, Git, GitHub, GitHub Actions, Workflows, Vercel, Postman, npm, Babel, Vite, Joi, Luxon, Zod

Other: UX/Usability, Responsive Design, API Development (REST), Agile Methodologies, CI/CD, State Management (React Context), PWA (Progressive Web Apps)

Languages: Swedish (Native), English (Fluent), Spanish (Fluent)

WORK EXPERIENCE

Frontend Developer – Mariano (NGO), Remote (Part-time)

September 2025 – Present

- Staff was unable to update website content and webshop items independently. I restructured CMS and added product sync. This enabled staff to manage content independently.
- Integrated donation and newsletter platforms (WeDonate, Zoho), which made it possible for visitors to donate to the organisation, and allowed the marketing team to send updates to newsletter subscribers.
- Added multilingual support, which improved accessibility for users.
- Interns lacked a proper onboarding process. I led onboarding by helping new interns and writing new documentation, which in the end improved team independence and led to fewer repeated questions.

Freelance Frontend Developer – 3D Print & Konsult, Remote

August 2025 – Present

- The client's WordPress website was outdated and difficult to maintain. Rebuilt and maintained the website, including themes, plugins, and custom CSS/JS, simplifying further development and maintenance.

Frontend Developer – Appears, Botkyrka (Fixed-term)

January 2025 – April 2025 (4 months)

- Contributed to the development of Sabina AI, the company's recruitment system.
- Connected user settings to the database, permanently saving preferences and creating a consistent cross-device experience.
- Implemented a walkthrough/functional guide, improving onboarding for new users.
- Developed new pages and forms, enabling users to register and update information directly in the database.
- Sabina AI lacked an official website. I initiated its development using Next.js, Sanity, and Tailwind based on UX designs.

Frontend Developer – Flaivy Nation AB, Stockholm (Fixed-term)

September 2024 – November 2024 (3 months)

- Developed a customizable translation system for the Qvanti platform, allowing customers to personalize language and terminology according to their branding, improving user experience and reducing support needs.
- Implemented the system in Next.js with PostgreSQL and a code generator, ensuring scalability, reusability, and faster development.

EDUCATION

Introduction to Programming in Python – University of Gävle, *September 2025 – January 2026*

Frontend Development – Medieinstitutet, Bromma, *September 2023 – May 2025*

Bachelor's Program in Preschool Education – Stockholm University, *September 2016 – January 2020*

Technology Program, Design & Product Development – Danderyd High School, *August 2012 – June 2015*
